

TIFFEN® UltraPol® Filters

Our most efficient filter yet for saturating colors and reducing glare

UltraPol – yet another tiffen advance, helping cinematographers and videographers realize their creative vision.

Tiffen Linear UltraPol and Circular UltraPol filters offer the best polarization effects available for professional motion picture and television work. They extract the maximum of unwanted glare from the scene and render crisp white clouds against a dramatically dark blue sky, like never before.

Distracting reflections from water and windows become invisible with the magic of the UltraPol filter. As the photos make perfectly clear, without UltraPol, the woman is hidden; with UltraPol, her face is the beautiful focal point. While removing glare, you also ensure richer, truer colors, free from glare's whitewash effects. UltraPols get the most from any scene that calls for a polarizer.

Some camera-related optics, like a video tap, employ a partially silvered mirror, or beamsplitter. This may require the use of a Circular UltraPol, which places a clear, quarter-wave retarder on the camera side of the filter, effectively de-polarizing the light being recorded, after the image enhancement is done.

Circular UltraPol filters are suitable for virtually all situations; Linear UltraPol filters excel in traditional applications.

Rotating the UltraPol varies the effect to meet your needs. They are available in our wide array of sizes and require 1-2/3 stop exposure compensation.

Tiffen precision-crafted filters are the overwhelming choice of film and video professionals around the world. Their superior quality is backed by the Tiffen ten-year warranty.
